

26/10/2020

Dear Sample Result ,

Please find enclosed the Test Report for your FoodPrint[®] Indicator test.
The Indicator test does not identify the specific food(s) to which you have an elevated IgG antibody concentration but simply gives a POSITIVE or NEGATIVE result.

If you require any advice in interpreting these results please speak to your referring practitioner or do not hesitate to contact our support team.

Warm Wishes

The CNS Team

555-SCNSLAB

Patient Name:	Result	Analysis Date:	23/10/2020
Patient Number:	202	Test Reference:	111
Date of Birth:	17/12/2000		

Positive

A **POSITIVE** result indicates that an elevated concentration of IgG antibodies **HAS** been detected in your blood sample to one or more of the foods tested in our FoodPrint panels.

To identify which specific foods you are reacting to you can upgrade from the FoodPrint Indicator test to a specific FoodPrint panel any-time within 30 days of taking your sample.

After this time you will need to send in a new sample and will be charged the full amount of the test.

If you wish to upgrade, please visit the CNS website www.camnutri.com.

Once on the website click on the Food Intolerance test tab and select the FoodPrint panel that you would like to upgrade to.

When you come to the payment page of the CNS website, input your upgrade code, found in the email that accompanied your FoodPrint Indicator test report, into the "Promotional Code" box and click "Apply".

Alternatively, please contact the practitioner who referred you so they can upgrade your test directly.
